## marie Developer, Role player, Idealist

I live in Sweden and work at Pineberry in Stockholm as a developer (mainly php/WordPress, some Python) since 2012.

In my spare time I explore the new and cool things that pop up every so often, discard some fairly soon, though others stick with me. I am a bit of an inspiration butterfly, and jump from project to project aimlessly. I will write for a month or two, then do digital art for a month or two, pick up the redesign of my page for the umpteenth time, etc. Unfortunately these butterfly tendencies are paired with a certain amount of perfectionism, which is one of the reasons I lose interest: If I can't get something as awesome as I want it to be, I just stop.

## ❧ likes ❧

- Clean code
- Innovative solutions
- Humanist serif fonts
- Bad puns
- Automation
- Markdown for posts/pages

## ❧ dislikes ❧

- Repetitive tasks
- Hacks
- Realist sans-serif fonts
- Inline CSS and JavaScript (by hand or JavaScript)
- Hard-to-reproduce bugs
- What-you-see-is-kind-of-sort-of-what-you-get-in-the-worst-way-possible

## What's up?

---

Mental note: Chrome has a bug when it comes to small-caps and

“ text-rendering: optimizeLegibility. ”

— 2013-08-07 20:22

## terminology in web development

Descriptions and definitions of words commonly (or not...) used.

## 10 useful wordpress plugins

Descriptions and whys-hows of plugins I personally use

## creating my theme

Workflow, tools and inspiration used to build MarieHogebrandt.se

## installing yeoman (grunt, bower and yo) on ubuntu

Yeoman is a catch-all phrase (at this time) for Grunt (automation), Bower (package manager) and Yo (scaffolder).

## open source report card

An interesting idea of parsing Github data to see activity for any given user.

## setting up development environment on ubuntu 12.10

Index to posts on how to setup my development environment and workflow

## installing phantomjs and casperjs on ubuntu

PhantomJS is a "headless WebKit scriptable with a JavaScript API", with CasperJS building on it to give high-level functions.

## git and github on ubuntu

Steps to setup Git on Ubuntu and how to set up your first Github repository (and why!)

## installing sass and compass on ubuntu

Sass is a pre-preprocessor for CSS which I feel makes life easier. Compass is a CSS Authoring Framework that adds commonly used mixins.

## showing typographic work

Explaining in more detail what decisions went into the typography.
